A passionate linguist and an ardent learner, web development is the perfect match to channel my linguistic and creative flair at the same time. Back end programming satiates my passion for problem solving while front end design is the perfect outlet for my artistic nature. I aspire to bring my excellent verbal and written communication skills alongside the coding ones that I'm continually acquiring.

Projects

Everrands
Full stack (Website/Github)
- Project to demonstrate full stack of an HTML-Tailwind-Jquery frontend and Express-Node-MySQL-Heroku backend
- Built a web app for neighborhoods to organize events and advertise paid errands within the neighborhood
- Persisted data in MySQL using the Sequelize ORM. Used NodeMailer to send emails to users. App is live on Heroku

Foodle
Frontend (Website/Github)
- Frontend project to demonstrate knowledge on HTML, CSS (Tailwind) and Javascript (Jquery)
- Built a recipe app that displays ingredients and their prices with a search option for macro-nutrient information.
- Data is retrieved using two third party API's. Used local browser storage to save user preferences on ingredients.

Other Projects
Individual projects to learn concepts across the full stack
- **Tech Blog**: Full stack application deployed on Heroku where users can login, post blogs and comment on others' posts.
- **Workday Scheduler**: App which saves and renders data from local storage using JS events.
- **Readme Generator**: Node.js app to generate a README.md file for Github repos
- **Weather Dashboard**: Used the OpenWeather API to retrieve weather data and display it in a portal built using Bootstrap
- **Team Profile Generator**: Node.js app to generate an HTML file for a team roster. Achieved 100% unit test coverage using Jest.

Programming

Frontend   HTML, JavaScript, CSS , Bootstrap, Tailwind, React-Redux, JQuery
Backend   SQL, MySQL, Express.JS, Node.JS, Jest, MongoDB

Work Experience

Al Aqmar LLC   *Austin*
Business Manager   *June 2021 - Present*
